SUMMARY

Fullstack Developer specializing in Laravel and modern web architecture, with hands-on experience delivering production-grade applications from database design through to hosting deployment. Skilled across both backend and frontend, and experienced in cross-platform mobile development with Flutter and Dart. Proven ability to integrate Laravel and Flutter through RESTful APIs to build connected, end-to-end systems. Holds a Bachelor's degree in Informatics Engineering from Universitas Pasundan, and combines strong engineering fundamentals with a drive to turn ideas into reliable, useful products.

WORK EXPERIENCES

PT LAPI ITB

Bandung, Indonesia

Fullstack Web and Mobile Developer

May 2026 - Present

- Built SCFS, a Laravel 12 supply-chain financing platform (PO, approvals, supplier payments) on a 4-layer Clean Architecture with automated dependency enforcement.
- Engineered a transaction-safe payment engine with locking and duplicate-payment protection, RBAC across 6 roles, and an immutable audit trail on all critical operations.
- Delivered responsive UIs (TailwindCSS, Livewire, AlpineJS) and a Flutter mobile app for scholarship payments, integrated via REST APIs.
- Shipped a CI quality pipeline (Larastan static analysis, Pint style gates, automated browser tests) with Redis-backed caching and queued background jobs.

Fullstack Developer, Pemagangan Nasional Kemnaker

Oct 2025 - Apr 2026

- Developed and maintained fullstack web applications using Laravel, MySQL, and JavaScript
 - Built responsive and user-friendly interfaces using Tailwind CSS, Bootstrap, and Blade templating
 - Developed multiple systems including a Hotel Management System and a financial management system (SCFS)
 - Implemented secure authentication and authorization systems using Keycloak, OAuth2, and OpenID Connect
 - Configured Single Sign-On (SSO) and email-based OTP authentication for centralized access control
 - Handled debugging, performance optimization, and ensured system reliability across applications
 - Collaborated in end-to-end development, from database design to deployment-ready features
-

PT Ganesa Jaya Sejahtra - GAJAH, Freelance

Bandung, Indonesia

Apr 2026 - May 2026

- Engineered a comprehensive booking and financial management system using Laravel, React.js (Inertia.js), and Tailwind CSS.

- Developed complex financial reporting modules implementing accrual basis accounting to track real-time revenue, validated income, and outstanding receivables.
 - Integrated dynamic PDF receipt generation (DomPDF) and automated Excel financial report exports (Maatwebsite/Excel) for the finance division.
 - Designed interactive and responsive dashboards with advanced filtering and state management to streamline the payment verification process.
-

Balai Besar Survei dan Pemetaan Geologi Kelautan, Internship

Bandung, Indonesia

Sept 2022 - Oct 2022

- Developed and maintained both the front end and back end of a web application using PHP, Laravel, MySQL, HTML, CSS, and JavaScript.
 - Built responsive and user-friendly UI components and integrated them seamlessly with the back end.
 - Troubleshoot, optimized, and improved the performance of the entire web application.
 - Researched and implemented new technologies to enhance the overall quality and functionality of the application.
-

EDUCATION

Bachelor of Technology - BTech, Informatics Engineering

2019 - 2025

Universitas Pasundan (Pasundan University) - GPA: 3.54 of 4.00

CERTIFICATION

- Meta React Native Specialization - Coursera | Number: 4DC988HZ2WME, Feb 2024
 - Flutter & Dart - The Complete Guide [2025 Edition] - Instructors Academind by Maximilian Schwarzmüller, Udemy, Number: UC-f8cb20fc-680b-47df-ae57-6ae126ebelf3, Nov 2023
-

SKILLS

- **Hard Skill:**

Languages: PHP, Dart, TypeScript, JavaScript, Kotlin

Backend: Laravel, Node.js, Express.js, Livewire, REST API Design, Eloquent ORM, Prisma ORM, Database Design & Migrations, Queue & Background Jobs (BullMQ), Caching (Redis), Server-Sent Events (SSE), Webhook Handling & Signature Verification, OpenAPI/Swagger

Frontend: React.js, Next.js, Blade Templating, AlpineJS, Tailwind CSS, Bootstrap, State Management, Responsive Design

Mobile: Flutter, React Native, Riverpod, Provider, Clean Architecture, Flutter Secure Storage, Firebase, Firestore, FCM, QR Code Implementation, Offline & Error-State Handling

Databases: PostgreSQL, MySQL, SQLite, Redis, Full-Text Search (pg_trgm), Query & N+1 Optimization, Indexing

Architecture & Principles: Clean Architecture, Domain-Driven Design (DDD), SOLID Principles, MVC, OOP, Multi-Tenant System Design, API Integration

Security & Access: Authentication & Authorization (JWT, Sanctum, SSO, OAuth2, OpenID Connect), Role-Based Access Control (RBAC), Two-Factor Authentication (2FA/OTP), Password Hashing (Argon2id/Bcrypt (Zod)), Audit Logging

Payments & Fintech: Payment Gateway Integration (Midtrans), Transaction-Safe Ledgers, Idempotency Keys, Pessimistic Locking, Settlement, Refund & Disbursement Flows

Integrations: RajaOngkir (Shipping & Region API), Courier Tracking Webhooks, Firebase Cloud Messaging, Web

& Mobile Push Notifications, Email/SMTP Delivery

Testing & Quality: Unit & Feature Testing (Jest, Supertest, Pest/PHPUnit, flutter_test), End-to-End Testing (Playwright), Static Analysis (Larastan/PHPStan), Test-Driven Development, Usability Testing

Tooling & Delivery: Git Version Control, CI/CD Pipelined Logging & Error Monitoring (Sentry), PerformanceOptimization, Debugging

- **Software Skill:** Visual Studio Code, Android Studio, Laragon, MySQL Workbench, GitHub Desktop, Postman, ChatGPT, Canva, Google Chrome, Chrome Extensions, Figma, Adobe XD, Adobe Illustrator, Adobe Photoshop, Adobe Animate, Git, Keycloak, Chrome DevTools, Niagahoster (Web Hosting & Deployment), GitHub, Composer, npm, Artisan CLI, Hostinger (Web Hosting & Deployment), phpMyAdmin, DB Beaver, Claude (AI Assistant), Trello/Notion (Project Management), cPanel, hPanel, SSH/Terminal.

PROJECTS PORTFOLIO

E-Commerce TokoRay Multi-Vendor Marketplace — Backend & Frontend Web Console Aug 2026 - Present

Technology: Node.js, Express.js, PostgreSQL, Prisma, Redis, BullMQ, Zod, JWT + Argon2id, Midtrans Payment Gateway, RajaOngkir Shipping API, Firebase Cloud Messaging, Next.js, Typescript, React.js, Tailwind CSS, Jest + Supertest, Sentry, OpenAPI/Swagger

Summary: Architected a multi-vendor e-commerce platform (36 domain modules, 60 data models) where independent sellers transact under one marketplace with tenant isolation enforced at the middleware layer. Engineered a zero-drift money path — Midtrans Snap checkout with timing-safe SHA-512 webhook verification, idempotency-keyed order and payment writes, and a multi-wallet commission ledger under pessimistic locking across settlement, refund, and seller disbursement — plus a full RajaOngkir logistics layer with ranked destination search, multi-courier rate quotes from a multi-warehouse inventory, and signature-verified tracking webhooks. Shipped the growth surface end to end: PostgreSQL full-text search with faceted filters, vouchers, flash promotions, loyalty points, reviews, and buyer↔seller live chat over Server-Sent Events, hardened by Redis caching, distributed rate limiting, store-staff RBAC, and an immutable audit trail across 475 tests in 81 suites. Fronted it with a 44-page Next.js admin and seller console driving catalog, order, finance, payout, and analytics operations with CSV reporting.

E-Commerce TokoRay Customer Mobile App Aug 2026 - Present

Technology: Dart, Flutter, Riverpod, go_router, Dio, Freezed, Clean Architecture, Flutter Secure Storage, Firebase, Midtrans Snap, Server-Sent Events, REST API Integration

Summary: Built the cross-platform Flutter shopping app fronting the marketplace on a strict 4-layer Clean Architecture with Riverpod DI and immutable Freezed models, keeping every screen unit-testable. Engineered the full checkout journey — live RajaOngkir address search, courier and cost selection, voucher redemption, and a Midtrans Snap handoff that reconciles order state on return so a killed app never loses a paid order — and delivered the engagement layer around it: faceted catalog search, flash promotions, wishlist, reviews, loyalty points, RMA returns, and buyer↔seller live chat streamed over Server-Sent Events with FCM push released on logout to stop notification leakage on shared devices. Secured sessions with Keystore/Keychain token storage, silent refresh interceptors, and typed offline/timeout handling, validated by 748 tests across 94 suites under a shared design system with dark mode.

PROJECTS

SCFS (Supply Chain Financing System) Web Platform Mar 2026 - Present

Technology: Laravel, MySQL, Livewire, Tailwind CSS, AlpineJS, RESTful API, Laravel Sanctum, GitHub Actions (CI/CD)

Summary: Architected an enterprise-grade financial platform routing multi-tier fund flow from donors/investors through the LKBB treasury down to merchants, suppliers, and scholarship students. Engineered a transaction-safe, multi-wallet ledger with pessimistic locking and immutable money handling for zero-drift integrity, plus a role-based

dashboard (6 roles), multi-level approval, and immutable audit trail. Built on a CI-enforced 4-layer Clean Architecture (317 files, 1,168 tests) exposing a Sanctum-secured REST API for mobile.

SCFS (Supply Chain Financing System) Mobile App

Apr 2026 - Present

Technology: Dart, Flutter, REST API Integration, Flutter Secure Storage, JSON Parsing, Firebase

Summary: Built a cross-platform Flutter app enabling university scholarship recipients to manage digital stipends and pay cashless at campus canteens. Engineered a fraud-resistant payment module using time-sensitive, auto-expiring QR codes with dynamic blur states, backed by real-time balance tracking and infinite-scroll transaction history. Integrated a token-secured REST API with encrypted local storage and async error handling for a stable, crash-free experience during peak campus traffic.

Sistem Pemesanan Tanah Makam (SIPETAM)

Apr 2026 - May 2026

Technology: PHP, Laravel, React.js, Inertia.js, MySQL, Tailwind CSS, JavaScript, DomPDF, Maatwebsite/Excel, GitHub , Niagahoster (Deployment & Hosting)

Summary: Built a full-stack SPA (Laravel + React via Inertia.js) for cemetery plot reservation and financial management, featuring an interactive booking engine with real-time availability and dynamic spatial mapping. Engineered an accrual-basis accounting module tracking revenue, validated cash/non-cash income, and real-time outstanding receivables — with automated PDF receipts (DomPDF) and Excel financial reports. Delivered a responsive Tailwind UI that streamlined payment verification and ensured audit-accurate finances.

Hotel Management System (Hotel Sawunggaling)

Oct 2025 - Jan 2026

Technology: PHP, Laravel, MySQL, JavaScript, Tailwind CSS, Bootstrap, AJAX, DataTables, HTML/Blade, Visual Studio Code, GitHub, Niagahoster (Deployment & Hosting)

Summary: Built an enterprise hotel management platform on Laravel MVC with a dynamic reservation engine — tiered customer groups (OTA, Corporate) and automated weekday/weekend pricing. Engineered a complex "Room Move" module that auto-deducts amenities stock, blocks double-booking, and rebalances invoices via automated adjustments into the Front Office billing system. Added room-utilization reporting and a flexible meeting-room booking module — cutting revenue leakage and boosting operational efficiency. Handled end-to-end delivery through Niagahoster deployment.

Enterprise IAM & Single Sign-On (SSO) System (PT LAPI ITB)

March 2026 - Apr 2026

Technology: PHP, Laravel, Keycloak, OAuth2 / OpenID Connect (OIDC), Laravel Socialite, MySQL, Java, SMTP

Summary: Led implementation of a centralized Keycloak-driven SSO and identity gateway securing the entire LAPI application ecosystem via OAuth2/OIDC and Laravel Socialite for stateless authentication. Architected a secure MFA pipeline by customizing and deploying a Java-based Email OTP plugin into the Keycloak engine, engineering custom execution sub-flows and StartTLS SMTP delivery for automated OTP. Delivered a scalable, enterprise-ready authentication portal reusable across all future LAPI apps.

MuseumApp (Museum Geologi Bandung)

Feb 2025 - Jul 2025

Technology: Dart, Flutter, Provider, Firebase, API, Visual Studio Code, GitHub

Summary: Final year thesis project focused on developing a mobile application for Museum Geologi Bandung using Flutter with Provider state management. The app enables visitors to access detailed information about museum collections through a user-friendly interface, integrated with Firebase for data storage and authentication, and connected to external APIs. The project covers end-to-end development, version control with GitHub, and deployment for Android devices, aiming to enhance the digital visitor experience at the museum.

MuseumApp Admin Panel (Museum Geologi Bandung)

Feb 2025 - Jul 2025

Technology: PHP, Laravel, Livewire, Tailwind CSS, MySQL, Simple-QRCode, GitHub

Summary: Web-based admin dashboard powering the MuseumApp mobile application for Museum Geologi Bandung. Built with Laravel and Livewire, featuring role-based access control (super admin, admin, visitor), full collection management with auto-generated QR Codes for on-site scanning, an educational quiz manager, visitor and XP tracking, and a real-time statistics dashboard. Serves as the content engine feeding the mobile visitor experience end-to-end.

SIREKAP

Sept 2022 – Nov 2022

Technology: PHP, Laravel, MySQL, HTML, CSS, JavaScript, Visual Studio Code, Git, GitHub

Summary: Contributed as a Fullstack Web Developer Intern, developing and maintaining both the front end and back end of a web application using PHP, Laravel, MySQL, HTML, CSS, and JavaScript. Collaborated with the team to deliver a responsive and fully integrated system, optimized application performance, and explored new technologies to improve overall quality.

Pengenalan Kebudayaan Jawa Barat (Introduction to West Javanese Culture)

Mar 2021 – Jun 2021

Technology: Adobe Illustrator, Adobe Photoshop, Adobe Animate

Summary: Game Developer – handled end-to-end game development, including design, asset integration, animation, and interactivity.

Case Study Application Development – Aplikasi Mengelola Data Mahasiswa dan Dosen

Feb 2023 – Jun 2023

Technology: Kotlin, Android Studio, REST API, GitHub

Summary: Developed an Android application as a major coursework project to manage three entities (Lecturer, Student, Course) with data stored both locally and on a server. Implemented Scaffold with drawer menu and bottom sheet navigation, integrated REST API endpoints for CRUD operations, and optimized the app for usability. Managed the full development process and collaborated via GitHub for version control and project tracking.
